S/0000/64/000/000/0140/0146

AUTHOR: Manenkova, R. N.; Serebrennikov, V. V.

TITLE: Spectrophotometric investigations of nonaqueous solutions of praseodymium, neodymium, samarium and erbium compounds

SOURCE: Soveshchaniye po khimii redkikh elementov. Leningrad, 1961. Khimiya redkikh elementov (Chemistry of rareelements); doklady\* soveshchaniya. Leningrad, Izd-vo Leningr. univ., 1964, 140-146

TOPIC TAGS: rare earth, praseodymium, neodymium, erbium, samarium, lanthanum, spectrophotometry, rare earth perchlorate, absorption spectrum, nonaqueous solution, acetic anhydride, acetic acid, acetone, pyridine, hydroxyquinoline

ABSTRACT: The authors investigated the absorption spectra (290-1100  $\mu\text{m}$ ) of crystalline hydrates of praseodymium, neodymium, samarium and erbium perchlorates in nonaqueous acetic acid, acetic anhydride, acetone and pyridine solutions (0.1-0.2 M), as well as the interaction of rare elements of the cerium group with o-hydroxyquinoline in these solvents. Spectrophotometric measurements on praseodymium, erbium and samarium perchlorates showed a small

1/3

Card

ACCESSION NR: AT4040550

shift on the order of 1-3 m $\mu$  only in pyridine, into the long-wave region for the first two and into the short-wave region for samarium. Neodymium showed a shift to the short-wave region in solutions of acetone and pyridine and into the long-wave region in solutions of acetic acid and acetic anhydride, when compared to water. The interaction of these perchlorates with o-hydroxyquinoline in acetone, pyridine and acetic acid produced an increase in absorption and a shift of the absorption band into the long-wave region. The shift observed was from 400-500 m $\mu$  to 400-540 m $\mu$ , indicating not just an additive effect but an interaction of the compounds. During the study of complex formation between neodymium perchlorate and o-hydroxyquinoline in acetone solution, by the method of isomolar series, it was found that if the ratio of Nd:Ox = 2:3, a bright yellow precipitate was formed, which could be dissolved by shaking. If the ratio of Nd:Ox = 3:7 or 1:4, the amount of precipitate was increased but it still disappeared with shaking. At a ratio of 1:9 the precipitate did not dissolve. At Nd:Ox ratios of 2:3, 3:7 or 1:4, an increased shift of the absorption maximum was observed. Qualitative analysis of the precipitate showed that it corresponds to [NdOx<sub>2</sub>OxH]ClO<sub>4</sub> where OxH and Ox<sup>-</sup> are a molecule and an ion of o-hydroxyquinoline, respectively. Analogous results were obtained with the other rare earths. Orig. art. has:

The physicochemical nature of rendering livestock fat  
R. Mirkin and A. Manerberger. *Mysnaya Ind. S.S.R.*  
22, No. 2, p. 13(1951).—The character of fatty tissue and  
bones and effect of heat on this are discussed. Best yields  
and lowest fatty acid content of product were obtained from  
the raw material soaked in ice water for 6 hrs. Rendering  
bones in an open tank yielded 30-45% of the fat, while in  
an autoclave 60-80% of the fat could be extd. The curve on  
development of free fatty acid during rendering of bones  
showed the following rendering temp. to free fatty acid  
65° 0.45; 85° 0.5; 100° 0.57; 110° 0.7; and 120° over  
1.0%

Explosive and Explosions

Influence of solid colloidal metal carbonates and sulfat  
on the formation and stability of foam. B. I. Mokrushin,  
K. A. Maserova, and N. G. Potekhina. Zhar. Fizika  
Rassv. 20, 145-7 (1953).—The action of colloidal  $\text{CaCO}_3$ ,  
 $\text{MgCO}_3$ , and  $\text{CaSO}_4$  as well as solns. of  $\text{Al}(\text{SO}_4)_2$  and col-  
loidal  $\text{Fe(OH)}_3$  was found to stabilize foam (for fire ex-  
tinguishers). Stability (min.) vs. wt. % of added stabilizer  
rises, passes through a max., and declines. The rate of  
foam collapse with  $\text{MgCO}_3$  and  $\text{Al}(\text{SO}_4)_2$  decreases and  
becomes linear as the wt. % of added powder increases.  
This is very pronounced with  $\text{Al}(\text{SO}_4)_2$ . I. Bencowitz

Title : A Study of the Postoperative Respiratory Dynamics of Patients Undergoing Abdominal Operations.

Orig Pub : Fiziol. morm. si patol, 1956, 3, № 4, 489-498

Abstract : The dynamic changes in the respiratory function of the diaphragm which arise following laparotomy are the result of a disturbance in the functional synergism between the central and peripheral portions of the diaphragm. Reflexly produced immobility of the base of the thoracic cage and the peripheral division of the diaphragm leads to hypoventilation of the lungs, which is more pronounced following laparotomy or after removal of an organ from the upper part of the abdominal cavity than when an organ is removed from the lower abdomen; the presence of a

Card 1/2

RUMANIA/Human and Animal Physiology - Respiration.

V-5

Abs Jour : Ref Zhur - Biol., No 4, 1958, 182;7

pneumoperitoneum promotes hypoventilation. Novocaine block of the lower intercostal nerves eliminates hypertonia of the peripheral part of the diaphragm, while the ensuing hypotonia promotes normalization of the movements of the diaphragm.

Title : Rapid Method for the Detection of Coli-Forms  
in Water

Orig Pub: Igiena, 1956, 5, No 3, 74-85

Abstract: First an enriching test is made on conventional  
broth (incubation period of 20-24 hours at 37°).  
From the test tubes which show turbidity an inoc-  
ulation is made on eosin agar, with addition of  
methylene blue, glucose and lactose (incubation  
12-24 hours). Comparative studies of river water  
for Coli-forms content, carried out by the rapid  
method, have revealed the advantages of the last

TITLE: Coverage Band Width of Molecular Generator Under the Effect of a Large External Force (O zakhvatyvanii molekulyarnogo generatora bol'shoy vneshney siloy)

PERIODICAL: Vestnik Moskovskogo Universiteta, Seriya matematiki, mehaniki, astronomii, fiziki, khimii, 1958, Nr 2, pp 109-114 (USSR)

ABSTRACT: The molecular generator developed in recent years is often applied as a source of oscillations which are very stable in frequency. Its phugoid motions, in particular the behavior of oscillation during the interference of an external force, however, are little known, since the investigations are connected with great mathematical difficulties. For large amplitudes of the external force the process of the drift is connected with asynchronous cancellation of the phugoid motions by the forced oscillations, whereby the amplitude of these oscillations increases with the approximation of the frequency of the external force to the frequency of the phugoid motion. By approximation of the total process and by averaging the occurring magnitudes the authors obtain some at least qualitatively interesting expressions and then in-

Card 1/2

Coverage Band Width of Molecular Generator Under the  
Effect of a Large External Force

SOV/55-58-2-14/35

vestigate the stability of the obtained approximative solutions. It is stated that for certain characteristic values there takes place a self-excitation of the phugoid motions so that the process is a pulsation between the forced oscillations and the phugoid motions. An estimation of the coverage band width is given.

dvukh molekulyarnykh generatorov pri maloy svyazi)

PERIODICAL:

Nauchnyye dokladы vysshey shkoly, Radiotekhnika i  
elektronika, 1958, Nr 3, pp 74-83 (USSR)

ABSTRACT:

The article is devoted to the theoretical analysis  
of the behaviour of two loosely coupled molecular  
generators within the range of synchronism and out-  
side of it. The authors establish relation for the  
synchronization band width, which are suitable for  
practical evaluations. According to their calcula-  
tions, jumps of the synchronous frequency may take  
place, when the frequency of both molecular genera-  
tors is close to the frequency of the molecular tran-  
sition into the system, if the parameters are chang-  
ed within the synchronization band. There are 6

TITLE: UHF-multiplier with a high multiplication factor

PERIODICAL: Radiotekhnika i elektronika, v. 7, no. 2, 1962.  
348 - 349

TEXT: Preliminary results are reported on investigating a frequency multiplier with a p-n diode used as a non-linear capacity. The construction of the multiplier was essentially identical to that described previously by V.B. Braginsky, et al. (Ref. 4: Radiotekhnika i elektronika, v. 6, no. 7, 1961, 1173), but the output frequency was increased to 24,000 Mcs/sec. The dependence of the output power upon the number of the harmonic is presented in the form of a graph showing that between the 32nd and 85th harmonics the power decreases smoothly by 14 db. The maximum signal observed was 70 db above the noise level. The time constant of the diode measured at - 10 V was  $1.14 \times 10^{-13}$  sec. At 660 Mcs/sec input frequency the multiplier

TITLE: Frequency multiplier with a nonlinear capacitance and high-Q circuits

SOURCE: Radiotekhnika i elektronika, v. 9, no. 6, 1964, 1079-1081

TOPIC TAGS: frequency multiplier, nonlinear capacitance frequency multiplier, 120 mc frequency multiplier

ABSTRACT: A new design (see Enclosure I) of frequency multiplier is reported. The input resonator with an internal helical conductor is tuned to 120 mc; its cold Q-factor is about 600. The output toroid resonator is tuned to an n-th harmonic of the input signal; its cold Q-factor is about 700-900. The nonlinear element is represented by a p-n diode which acts as a coupling between the two resonators. For maximum output, the distance  $x$  is selected between  $\lambda_{nd}/4$  and  $\lambda_{nd}/2$ . Outputs of 10 and 5 mw were obtained experimentally with multiplication factors

Card 1/3

L 19058-65

ACCESSION NR: AP4040918

18 and 24, respectively; the input power was 250-300 mw. Another multiplier was tested which had a multiplication factor of 2 and was intended as one stage of a multistage converter. It was found that: (1) the single-stage converter with a nonlinear capacitance has a conversion factor higher by 10 db than the multiplier with a nonlinear resistance; (2) the single-stage multiplier has a higher conversion factor than the multistage multiplier. TITLE: Frequency multiplication by a diffusion capacitance

SOURCE: Radiotekhnika i elektronika, v. 11, no. 7, 1966, 1275-1284

TOPIC TAGS: frequency multiplication, semiconductor diode, diode capacitor

ABSTRACT: The W. Shockley formula for the diffusion capacitance of a semiconductor diode was developed for the case of a small harmonic signal when the a-c voltage amplitude is much lower than  $kT/q \approx 0.025$  v. As much higher amplitudes are used in frequency multipliers, the present article deduces an integral formula for the diffusion current corresponding to a strong a-c signal and, from this formula, calculates the efficiency of frequency multiplication by the diffusion capacitance. It is assumed that: (a) the resistance of the semiconductor body is much lower than that of the p-n junction and (b) the contribution of the barrier capacitance to the frequency

Card 1/2

UDC: 621.374.4:621.382.2

ACC NR: AP6023873

conversion is small. The diffusion-capacitor Q-factor vs. frequency is evaluated assuming that the impurities in the diode base are distributed according to a power law. An experimental verification included the determination of: (a) frequency-conversion efficiency vs. harmonic no. and (b) saturating input power vs. harmonic no. These results were obtained:

Harmonic no.	2	3	4	5	6
With 400-mv input,					
the output mw is	240	175	130	75	56
Multiplication efficiency, %	60	44	32	18	13
Saturating input, mw	over 1000	700	400	350	330

The table illustrates the feasibility of one-stage high-ratio frequency multipliers. "In conclusion, the authors wish to thank K. S. Rzhevkin for his valuable advice and comments." Orig. art. has: 4 figures, 46 formulas, and 2 tables.

TITLE : The Automatic Control of the Transparency of Lard at the Titan Plant

ORIG. PUB. : Khranitelna Promislenost, 7, No 12, 1964 (L-1)

ABSTRACT : The transparency of the lard (L) produced by the rendering of swine fat at the Titan plant depends to a considerable degree on the content of highly dispersed proteins in the L. Due to the nonuniformity of the raw material received at the plant, the transparency of the rendered L can deviate sharply from the established Bulgarian State Standard. The transparency of various specimens of rendered L was studied with a Pulfrich colorimeter (thickness of layer 10 mm, temperature 20°).
